

MDM & Supplier Tool Project

DB Schenker, London 2020-2022

Master-Data-Management-MDM-Project

Master Data Management (MDM) Project 2020-2022

The Master Data Tool was launched by the corporate team to help the setup of all global accounts. I assisted in the creation and updating processes on how accounts are created, validated and maintained in the system. Another responsibility I had was to train new users on how to use the MDM tool and attended meeting the other users of the system with queries so that I could expand my knowledge of how the tool works so that in order to update current processes so that my colleagues can help us validate addresses and create new accounts with the system. I was also in charge of removing any duplicates from the system and confirm all UK and Irish credit and supplier accounts in MDM.

The Supplier Tool allows electronic registration for new vendors. I attended and contributed towards the creation and launch of the supplier tools. By attending regular meetings conducting live tests of the new supplier system I was able to give feedback to the creator suggestions on how the system could be improved to improve efficiency when opening new vendor accounts for UK and Ireland.
