

Basware Project

DB Schenker, London 2018-2020

I was a part of the Basware invoicing project in DB Schenker, launching a new invoicing system. I was able to help increase data validation accuracy by 90%. I developed a KPI dashboard showing team errors and training the team to improve accuracy by 10%. Using the KPI reports, I was able to help train the finance administrators and made sure all invoicing within the old system was up to date to prevent data loss during the switch to the new system. I was a part of the testing stages and contributed towards data tagging to help automation in the system so that system could automatically add supplier information and understand coding. I led and advised finance administrators with all invoicing coding. Two additional responsibilities I had were to ensure invoices were sent to the correct workflow and to query old invoices on behalf of the branches during the launch of the new software.
